Subject Index

Note: Page numbers with the prefix "AP" are in the Appendices. Page numbers with the prefix "17" are in the online Chapter 17, Second Order Differential Equations.

A

Abscissa, AP-10
Absolute change, 188
Absolute convergence, 564–565
Absolute Convergence Test, 565
Absolute extrema, finding, 202–203
Absolute (global) maximum, 201–202, 820–822
Absolute (global) minimum, 201–202, 820–822
Absolute value
  definition of, AP-4–AP-5, AP-29
  function, derivative of, 162
  as piecewise-defined function, 22–23
Acceleration
  definition of, 144
  derivative of (jerk), 144–145
  as derivative of velocity, 144–146
  free fall and, 145
  normal component of, 744–749
  in polar coordinates, 750–751
  in space, 720
  tangential component of, 744–749
Addition
  formulas, trigonometric, 43
  of functions, 32–33
  of vectors, 674–675
Additivity
  double integrals and, 860
  for gradients, 803
  line integrals and, 924–925
Additivity Rule, for definite integrals, 287
Albert of Saxony, 560
Algebra, Fundamental Theorem of, AP-32–AP-33
Algebraic functions, 28
Algebraic properties, of real numbers, AP-1, AP-23
Algebra operations, vector, 674–675
Algebra rules, for finite sums, 278
Algebra systems, computer. *See* Computer algebra systems (CAS)
Alternating series
  definition of, 571–572
  harmonic, 571–573, 586
Alternating Series Estimation Theorem, 573, 598
Alternating Series Test, 571
Amperes, 17-19
Angle convention, 40
Angle of inclination, AP-11–AP-12
Angle of elevation, 728
Angles
  direction, 687
  between planes, 702
  in standard position, 40
  in trigonometric functions, 39–40
  between vectors, 681–683
Angular velocity of rotation, 992
Antiderivatives
  definition of, 249
  difference rule, 251
  of the exponential function, 406
  finding, 249–252
  and indefinite integrals, 254–255
  motion and, 252–253
  of vector function, 725
Applied optimization, 234–236
  of area of rectangle, 232
  examples from economics, 236–238
  solving problems, 232
  using least material, 233–234
  volume of can, 233
Approximations
  differential, error in, 186–187
  by differentials, 180
  error analysis of, 507–510
  linear, error formula for, 811, 836
  Newton's Method for roots, 244–247
  for roots and powers, 182–183
  by Simpson's Rule, 505–506
  standard linear, 181, 810
  tangent line, 180, 810
  by Taylor polynomials, 591
  trapezoidal, 503–505
  by Trapezoidal Rule, 503–505
  using parabolas, 505–506
Arbitrary constant, 250
Arccosine function
  defining, 435–436
  identities involving, 436–437
Archimedes' area formula, 306
Arc length
  along curve in space, 734–736
  differential, 630–631
  differential formula for, 354–355
  discontinuities in $dy\,dx$, 354
  formula, 630, 735
  of a function, 354–355, 736
  length of a curve $y = f(x)$, 351–353
  and line integrals, 922–924
  parameter, 735
Arcsine function
  defining, 435–436
  identities involving, 436–437
Arctangent, 604–605
Area
  of bounded regions in plane, 864–866
  cross-sectional, 332
  under curve or graph, 289
  between curves, 317–319
  as definite integral, 266
  definition of, 289
  by double integration, 864–866
  enclosed by astroid, 626–627
  by Green's Theorem, 963–964
  infinite, 513
  of parallelogram, 690–691, 968
  in polar coordinates, 870
  of smooth surface, 968
  surfaces and, 356–359, 632, 965–973
  of surfaces of revolution, 356–359, 632
  total, 266, 303–304
Area differential, 643
Argand diagrams, AP-29
Argument, AP-29
Arithmetic mean, 414, 834
Arrow diagrams, 20, 842
Associative laws, AP-24
ASTC rule, 41
Astroid
  area enclosed by, 626–627
  centroid and, 631
  length of, 628
Asymptotes
  of graphs, 101–111
  in graphs of rational functions, 27
  horizontal, 103–106, 109–110
  of hyperbolas, 651
  oblique or slant, 106
  vertical, 101, 109–110
  vertical, integrands with, 516–517
Auxiliary equation, 17-3
Average rates of change, 58
Average speed
  definition of, 56
  moving objects and, 56–58
  over short time intervals, 57
Average value, 272–274
  of continuous functions, 291–292
  of multivariable functions, 866, 881
Average velocity, 143

Axis(es), 334–337
coordinate, AP-10
of ellipse, 649, AP-17
moments of inertia about, 926, 982
of parabola, 648, AP-15
spin around, 953–956

B

Base *a*
of cylinder, 332
of exponential function, 408–409
logarithms with, 411
Bendixson's criterion, 965
Bernoulli, Daniel, 202
Bernoulli, Johann, 161, 425
Binary search, 457–458
Binomial series, 601–603
Binormal vector, 749
Birkhoff, George David, 311
Bolzano, Bernard, 144
Boundary points, AP-3
finding absolute maximum and minimum values, 820–822
for regions in plane, 761
for regions in space, 763
Boundary value problems, 17-6
Bounded functions, 118
Bounded intervals, 24
Bounded regions
absolute maxima and minima on, 820–822
areas of, in plane, 864–866
definition of, 761
Bounded sequences, 538–539
Box product, 693–694
Brachistochrones, 621

C

Cable, hanging, 29, 453
Calculators
to estimate limits, 67–68
graphing with, 47–50
Cantor set, 552
Capacitance, 17-19
Carbon-14 decay, 421
Cardiac index, 846
Cardioid, area
definition of, 641
enclosed by, 643
graphing of, 634
length of, 645
in polar coordinates, area, 643
Cartesian coordinates
conversion to/from polar coordinates, 870–872
in plane, AP-9–AP-10
related to polar coordinates, 634–637
systems, 667–670
three-dimensional (*See* Three-dimensional coordinate systems)
triple integrals in, 874–882
Cartesian integrals, changing into polar integrals, 870–872
CAS. *See* Computer algebra systems
Catenary, 29, 453
Cauchy, Augustin-Louis, 430
Cauchy-Schwarz inequality, 688
Cauchy's Mean Value Theorem, 430–431
Cavalieri, Bonaventura, 334
Cavalieri's principle, 334
Centered difference quotients, 157
Center of linear approximation, 181
Center of mass
centroid, 378–379
coordinates of, 374, 926, 982
definition of, 371, 372
moments and, 371–381, 885–891
of solid, 885
of thin flat plate, 374–377
of thin shell, 982–983
of wire or spring, 926
Centroids, 378–379, 886
Chain curve, 453
Chain Rule
of compositions, 158–161
and curvature function, 740
derivation of Second Derivative Test and, 835
for differentiable parametrized curves, 625
and directional derivatives, 798–799
of exponential functions, 406, 409
for functions of three variables, 790–791
for functions of two variables, 788–790
for implicit differentiation, 793–794, 971
for inverse hyperbolic functions, 450
and motion in polar coordinates, 751
"outside-inside" rule and, 161, 805
for partial derivatives, 788–795
for paths, 805
with powers of function, 161–163
proof of, 160–161, 187
related rates equations, 171, 172
repeated use of, 161
Substitution Rule and, 308–312
for two independent variables and three intermediate variables, 791–793
for vector functions, 721, 722
Change
of base in a logarithm, 411
estimating, in special direction, 809
exponential, 415–416
rates of, 56–61, 121–122, 142–148
sensitivity to, 148, 187–189
Charge, electrical, 1005
Circles
of curvature, for plane curves, 741–742
length of, 628
osculating, 741
in plane, AP-13–AP-15
polar equation for, 647
Circulation
density, 953–956
flux *vs.,* 937
for velocity fields, 936–937
Cissoid of Diocles, 170
of polynomial, 26–27
Clairaut, Alexis, 783
Clairaut's Theorem, 783
Closed curve, 937
Closed finite interval, AP-3
Closed region, 761, 763
Cobb, Charles, 833
Cobb-Douglas production function, 833
Coefficients
binomial, 602
determination for partial fractions, 494–495
of power series, 578
undetermined, 494
Combining functions, 32–36
Combining series, 548–549
Common factors, 67–68
Common functions, 25–29
Common logarithm function, 411
Commutativity laws, AP-24
Comparison tests, 559–563
for convergence of improper integrals, 518–520
for convergence of series, 559–561
Completeness property of real numbers, AP-1–AP-2, AP-24, AP-27
Complete ordered field, AP-24
Complex conjugate, AP-28
Complex numbers
Argand diagrams, AP-29
definition of, AP-26
development of, AP-26–AP-29
Euler's formula and, AP-29
Fundamental Theorem of Algebra and, AP-32–AP-33
imaginary part of, AP-27
multiplying, AP-30
powers of, AP-31
quotients, AP-30
roots of, AP-31–AP-32
Component equation, for plane, 699
Component form of vectors, 672–674
Component functions, 716, 929
Component (scalar) of **u** in direction of **v**, 685
Component test
for conservative fields, 947, 949
for exact differential form, 950
Composition of functions, 33–34
continuity of, 94–95, 773
definition of, 33
derivative of, 158–161, 721
Compressing a graph, 34
Compression of a gas, uniform, 955–956
Computational formulas, for torsion, 749
Computer algebra systems (CAS)
in evaluation of improper integrals, 517–518
integral tables and, 497–501
integration with, 499–501
Computers
to estimate limits, 68–69
graphing
of functions, 47–50
of functions of two variables, 764
Concave down graph, 221
Concave up graph, 221
Concavity
curve sketching and, 220–228
second derivative test for, 221
Conditional convergence, 573–574
Cones
elliptical, 705, 707
parametrization of, 966
surface area of, 968
Conics
in Cartesian coordinates, 655–660
defined, 647–648, 655
eccentricity of, 655–657
in polar coordinates, 647–652
polar equations of, 647–649
Connectedness, 97
Connected region, 943
Conservation
of angular momentum, 758

of mass, 1010
Conservative fields
component test for, 947, 949
finding potentials for, 947–949
as gradient fields, 945
line integrals in, 949
loop property of, 946
and Stokes' theorem, 995–996
Constant
rate, 416
spring, 363
Constant force, work done by, 362, 686
Constant Function Rule, 721
Constant functions, 65, 67
definition of, 25, 65
derivative of, 133
Constant Multiple Rules, 66
for antiderivatives, 66, 251
for combining series, 548
for derivatives, 134–135
for finite sums, 278
for gradients, 803
for integrals, 287, 860
for limits, 66, 67
of functions of two variables, 769
of sequences, 534
Constant Value Rule for finite sums, 278
Constrained maximum, 825–828
Constrained minimum, 825–828
Construction of reals, AP-25
Continuity, 90–93. *See also* Discontinuity
of compositions, 773
differentiability and, 129, 785
of function at a point, 91–93
at interior point, 91
at left endpoint, 91
limits and, 56–111
for multivariable functions, 771–773
partial derivatives and, 781–782
of vector functions, 717–718
Continuity equation of hydrodynamics, 1006–1007
Continuity Test, 92
Continuous extension, 98–99
Continuous functions, 90, 93–94, 202
absolute extrema of, 205–206, 773
average value of, 291–292, 866, 881
compositions of, 94–95
definition of, 93–94, 718
differentiability and, 129
extreme values of, on closed bounded sets, 773
integrability of, 285, 286
Intermediate Value Theorem for, 96–98
limits of, 91–95
nonnegative, average value of, 272–274
at a point, 91–93, 771
properties of, 94
theorem for sequences, 535
Continuous vector field, 929
Contour curve, 762
Convergence
absolute, 564–565
of approximations in Newton's method, 247
conditional, 573–574
definition of, 285
geometric, 545
of improper integrals, 513, 518
Integral Test, 553–556
interval of, 583
power, 578–581
of power series, 578–581
radius of, 581–583
of Riemann sums, 285
of sequence, 532–534
of Taylor Series, 594–599
tests for, 518–520, 575
Convergence Theorem for Power Series, 581
Convex graph, 221
Coordinate axes
definition of, AP-10
moments of inertia about, 926, 982
Coordinate conversion formulas, 901
Coordinate frame
left-handed, 667
right-handed, 667
Coordinate pair, AP-10
Coordinate planes
definition of, 667
first moments about, 926, 982
Coordinates
of center of mass, 374, 926, 982
polar, integrals in, 868–869
xyz, line integrals and, 933
Coplanar vectors, 675
Corner, 128
Cosecant, 40
Cosecant function
extended definition of, 40–41
integral of, 402
inverse of, 437–438
Cosine(s)
of angle between vectors, 682
direction, 687
extended definition of, 40–41
integrals of products of, 478–480, 482–483
values of, 41
Cosine function
derivative of, 153–154
graph of, 28
integral of, 478
inverse of, 435–436
Costs
fixed, 147
marginal, 146–147
variable, 147
Cotangent function, 40–41
extended definition of, 40–41
integral of, 402
inverse of, 437–438
Cot x
derivative of, 155
integral of, 401–402
inverse of, 437–438
Courant, Richard, 133
Critical point, 205, 226, 817, 822
Cross product
with determinants, 691–692
proof of distributive law for, AP-47–AP-48
properties of, 690
right-hand rule for, 689
of two vectors in space, 690
Cross Product Rule for derivatives of vector functions, 721–722
Cross-sections
horizontal, limits of integration and, 859–860
vertical, limits of integration and, 859
volumes using, 332–339
Csc x
derivative of, 155
integral of, 401–402
inverse of, 437–438
Cube root function, 26
Cubic functions, 27
Curl, **k**-component of, 953–956
Curvature
calculation of, 739, 748–749
center of, 741
of plane curves, 738–743
radius of, 741
in space, 742
Curved patch element, 967
Curves, 719, 741
area between, 317–319
area under, 289, 513
assumptions for vector integral calculus, 943
closed, 937
contour, 762
generating for cylinder surface, 704
graphing of, 317–319
initial point of, 616
level, 802–803
negatively oriented, 958
parametric, 616–617
parametrically defined, length of, 627–630
parametrized, 617, 625–629
plane
curvature of, 738–741
flux across, 937–938
parametizations of, 616–620, 716
plates bounded by two, 377–378
points of inflection of, 221–223
polar, length of, 644–645
positively oriented, 958
secant to, 58–59
sketching, 220–228
slope of
definition of, 58–60, 120
finding, 58, 120, 639
smooth, 21, 351–353, 627–628
curvature of, 738–741
length of, 734
speed on, 736
torsion of, 747
in space, 716–722
arc length along, 734–736
binormals to, 745
formulas for, 749
normals to, 740
parametric equations for, 716
tangent line to, 120
tangents to, 56–61, 736, 802–803
terminal point of, 616
vector equations for (*See* Vector functions)
work done by force over, 934–936
$y = f(x)$, length of, 351–353
Cusp, 128, 351
Cycloids, 620
Cylinder(s)
base of, 332
parabolic, flux through, 980
parametrization of, 966
quadric surfaces and, 704–708
slicing with, 343–345
volume of, 332

Cylindrical coordinates
definition of, 894
integration with, 894–898
motion in, 751
parametrization by, 966
to rectangular coordinates, 894, 901
from spherical coordinates, 901
triple integrals in, 894–902
volume differential in, 895
Cylindrical shells, volumes using, 343–348
Cylindrical solid, volume of, 332–333
Cylindrical surface, 357

D

Damped vibrations, 17-17–17-18
Decay, exponential, 416
Decay rate, radioactive, 420
Decreasing function, 23–24, 215–216
Dedekind, Richard, 281, 549, AP-25
Definite integrals, 291–292
applications of, 332–387
definition of, 266, 283–285, 303
evaluating, 303
evaluation of, by parts, 475
existence of, 284–285
Mean Value Theorem for, 296–297
nonnegative functions and, 289–291
notation for, 284
properties of, 286–289
shift property for, 324
substitution in, 314–316
of symmetric functions, 316–317
of vector function, 726
Definite integration, by parts, 475
Definite integration by substitution, 314
Degree, of polynomial, 27
"Del *f*", 800
De Moivre's Theorem, AP-31
Density
circulation, 953–956
as continuous function, 374
flux, 958
probability function, 890
Dependent variable of function, 19, 759
Derivative product rule, 136, 217
Derivative quotient rule, 137–138, 155–156, 572
Derivative rule for inverses, 392
Derivatives, 227–228
of absolute value function, 162
alternate formula for, 125
applications of, 201–345
calculation from definition, 125–126
of compositions, 158–161, 721
of constant function, 133
constant multiple rule for, 134–135
of cosine function, 153–154
Cross Product Rule, 721
definition of, 124
difference rule for, 135–136
directional (*See* Directional derivatives)
Dot Product Rule, 721
in economics, 146–147
of exponential functions, 406–407
as function, 120, 124–129
General Power Rule for, 134, 408–409
graphing of, 126–127
higher-order, 139, 168
of integral, 298
of inverse functions, 388–393
of inverse hyperbolic functions, 449–451
of inverse trigonometric functions, 438–441
involving $\log_a x$, 412
left-handed, 127–128
Leibniz's Rule, 126, 330
notations for, 126
*n*th, 139
one-sided, 127–128
partial (*See* Partial derivatives, at a point)
of power series, 584
as rate of change, 142–148
of reciprocal function, 125
right-handed, 127–128
second-order, 139
of sine function, 152–153
of square root function, 126
symbols for, 139
of tangent vector, 739
third, 139
of trigonometric functions, 152–156
of vector function, 718–720
as velocity, 142–143, 720
Derivative sum rule, 135–136, AP-8–AP-9
Derivative tests, for local extreme values, 204–205, 816–822, 849–855
Descartes, René, AP-10
Determinant(s)
calculating the cross product, 691
Jacobian, 907, 910, 912
Difference quotient
definition of, 121
forms for, 125
limit of, 121–122
Difference Rules, 66–67
for antiderivatives, 251
for combining series, 548
for derivatives, 133–139
for exponential functions, 135–137
for finite sums, 278
of geometric series, 548
for gradient, 803
for higher-order derivatives, 139
for integrals, 287
for limits, 66, 67
of functions with two variables, 769
of sequences, 534
for products and quotients, 136–138
for vector functions, 721
Differentiability, 127–129, 778, 782, 784–785
Differentiable functions
constant multiple rule of, 134
continuity and, 129, 785
continuous, 129, 627
definition of, 125
derivatives of inverses of, 392–393
graph of, 184
on interval, 127–128
parametric curves and, 625
partial derivatives, 776–778
rules for, 133–139, 158–163, 720–722
Taylor's formula for, 591
Differential approximation, error in, 186–187
Differential equations
initial value problems and, 252
particular solution, 252
separable, 416–418
Differential equations, first-order
applications of, 1030–1035
autonomous differential equations, 1036, 1044
Bernoulli differential equation, 1031
carrying capacity, 1042
competitive-hunter model, 1044–1046
curve, sigmoid shape, 1042
differential equations, 1016–1018
equilibrium values, 1037, 1038, 1044
Euler's method, 1016, 1018–1022
exponential population growth model, 1031–1032
falling body, encountering resistance, 1039–1041
first-order linear equations, 1024–1025
graphical solutions of autonomous, 1036–1038
initial value problems, 1017
integrating factor, 1025
Law of Exponential Change, 1031
limit cycle, 1046
limiting population, 1041
logistic population growth, 1041–1042
mixture problems, 1033–1035
motion with resistance pro-portional to velocity, 1030–1031
Newton's law of cooling, 1039
Newton's second law of motion, 1040
numerical method and solution, 1019
orthogonal trajectories, 1032–1033
phase lines and phase planes, 1037, 1044
predator-prey model, 1048–1049
resistance proportional to velocity, 1030–1031
rest points, 1044, 1045
RL circuits, 1028
slope fields, 1018–1019
solution, 1016–1018
solution curves, 1018
standard form of linear equations, 1024
steady-state value, 1028
systems of differential equations, 1043
terminal velocity, 1041
Differential equations, second-order
auxiliary equation, 17-3
boundary value problems, 17-6
damped vibrations, 17-17–17-18
overdamping, 17-18
underdamping, 17-18
electric circuits, 17-18–17-19
Euler equation, 17-2–17-23
general solution, 17-2
homogeneous equations, 17-1, 17-2–17-5
initial conditions, 17-5–17-6
linear combination, 17-1
linearity, 17-20
linearly independent solutions, 17-2
nonhomogeneous equations, 17-1, 17-7–17-11
power-series solutions, 17-24–17-29
superposition principle, 17-1
trivial solution, 17-2
variation of parameters, 17-12–17-14
Differential forms, 950–951
Differential formula, short form of arc length, 354–355
Differentials
definition of, 181
estimating with, 185–186
linearization and, 180–189

surface area, for parametrized surface, 969
tangent planes and, 811–812
total, 811
Differentiation, 120–122
Chain Rule and, 158–163
derivative
as a function, 124–129
as a rate of change, 142–146
of trigonometric functions, 152–156
implicit, 166–169, 793–795
and integration, as inverse processes, 303
linearization and, 180–189
related rates, 171–176
rules, 133–139
term-by-term for power series, 584
of vector functions, rules for, 720–722
Direct Comparison Test, 518, 520, 560–561
Directed line segments, 672
Direction
along a path, 616–617, 922–923
estimating change in, 809
of vectors, 676
Directional derivatives
calculation of, 800–802
definition of, 798
as dot product, 800
estimating change with, 809
and gradients, 802–803
gradient vectors and, 798–805
interpretation of, 799–800
in plane, 798–799
properties of, 801
Direction cosines, 687
Directrix (directrices)
of ellipse, 656
of hyperbola, 656
of parabola, 648, 656
Dirichlet, Lejeune, 514
Dirichlet ruler function, 117
Discontinuity, 92–93, 128
in *dy dx,* 354
infinite, 93
jump, 93
oscillating, 93
point of, 93
removable, 93
Discriminant (Hessian) of function, 818
Disk method, 334–337
Displacement
definition of, 142, 271
vs. distance traveled, 271–272, 301
Display window, 47–50
Distance
formula, 669
in plane, AP-13–AP-15
and spheres in space, 669–670
in three-dimensional Cartesian coordinates, 744
point to line, 698
point to plane, 698, 701
point to point, 669
Distance traveled
calculating, 269–271
vs. displacement, 271–272, 301
total, 271, 301
Distributive Law
proof of, AP-47–AP-48
for vector cross products, AP-47–AP-48
Divergence
of improper integrals, 513
to infinity, 533
limits and, 513
to negative infinity, 533
*n*th-term test for, 547–548
of sequence, 532–534
of series, 547
tests for, 518–520, 575
of vector field, 956–958, 998–999
Divergence Theorem
for other regions, 1004–1005
for special regions, 1002–1003
statement of, 999
Domain
connected, 943
of function, 19–20, 759, 760
natural, 20
simply connected, 943
of vector field, 929, 943
Dominant terms, 111
Domination, double integrals and, 860
Domination Rule for definite integrals, 287
Dot product
angle between vectors, 681–683
definition of, 682
directional derivative as, 800
orthogonal vectors and, 683–684
properties of, 684–686
Dot Product Rule for vector functions, 721
Double-angle formulas, trigonometric, 43
Double integrals
Fubini's theorem for calculating, 852–854
over bounded nonrectangular regions, 855–856
over rectangles, 850–854
in polar form, 867–872
properties of, 860–861
substitutions in, 906–911
as volumes, 851–852
Double integration, area by, 864–866
Douglas, Paul, 833
Dummy variable in integrals, 285

E

Eccentricity
of ellipse, 656
of hyperbola, 656
of parabola, 656
in polar coordinates, 655–657
polar equation for conic with, 657
Economics
Cobb-Douglas production function, 833
derivatives in, 146–147
Electric circuits, 17-18–17-19
Electric field, 942
Electromagnetic theory (Gauss' Law), 1005–1006
Elements of set, AP-2
Ellipse Law (Kepler's First Law), 752
Ellipses
center of, 649, AP-17
center-to-focus distance of, 650
eccentricity of, 656
focal axis of, 649
major axis of, 650, AP-17
minor axis of, 650, AP-17
perimeter of, 629–630
polar equations of, 657–659
standard-form equations for, 650, AP-16
vertices of, 649
Ellipsoids
definition of, 705
graphs of, 707
of revolution, 705
Elliptical cones, 705, 707
Elliptical paraboloids, 707
Elliptic integral, 405–406
of first kind, 609
of second kind, 629
as series, 609
Empty set, AP-2
Endpoint extreme values, 205
Endpoint values of function, 91, 206
Equal Area Law (Kepler's Second Law), 752–753
Equations
differential (*See* Differential equations)
for ellipses, 650, 659
Euler's identity, 606–607
focus-directrix, 656
for hyperbolas, 650–652
ideal projectile motion and, 728
inverse, 405
linear, AP-13
parametric (*See* Parametric equations)
for plane in space, 698–699
point-slope, AP-13
polar for circles, 659–660
polar for lines, 659
related rates, 171–176
relating polar and Cartesian coordinates, 636
relating rectangular and cylindrical coordinates, 894
Error analysis
for linear approximation, 811
for numerical integration, 507–510
in standard linear approximation, 186–187, 811
Error estimation, for integral test, 556–557
Error formula, for linear approximations, 186–187, 811, 836, 844, 845, 869
Error term, in Taylor's formula, 595
Euler, Leonhard, 1021, AP-49
Euler equation, 17-2–17-23
Euler's formula, AP-29
Euler's identity, 606–607
Euler's method, 1016, 1019–1022
Evaluation Theorem (Fundamental Theorem, Part 2), 300–301
Even functions, 24–25
Exact differential forms, 950–951
Expected value (mean), 891
Exponential change, 415–416
Exponential functions, 28
with base *a,* 408, 411
derivatives of, 135–137, 410–411
description of, 28, 404–405
general, 408–409
growth and decay, 416
integral of, 406–407
natural, 405
Exponential growth, 416
Exponents, Laws of, 407–408
Extrema
finding of, 204–206
global (absolute), 201–204
local (relative), 203–204, 216–217, 223–225, 817

Extreme values
constrained, and Lagrange multipliers, 828
at endpoints, 202
of functions, 201–206, 816–822
local (relative)
derivative tests, 204, 216–218
Extreme Value Theorem, 773, AP-24
for several variables, 816, 817
for single variable functions, 203–204
Extreme Value Theorem, 202–203

F

Factorial notation, 537
Fan-shaped region in polar coordinates, area of, 643
Fermat, Pierre de, 59
Fermat's principle in optics, 235–236
Fibonacci numbers, 538
Fields
conservative, 942–947, 995–996
electric, 922
gradient, 945
gravitational, 942
number, AP-24
ordered, AP-24
vector, 931–932
Finite (bounded) intervals, AP-3
Finite limits, 101–102
Finite sums
algebra rules for, 278
estimating with, 266–274
limits of, 279–280
and sigma notation, 276–279
First Derivative Test, 216–218, 817, 827
First derivative theorem for local extreme values, 202–203, 216–218
First moments
about coordinate axes, 885
about coordinate planes, 885, 982
masses and, 885–886
First-order differential equations. *See* Differential equations, first-order
Flat plate, center of mass of, 374–377, 885
Flight time, 729
Flow integrals, 936–937
Fluid flow rates, 957
Fluid force
and centroids, 379
against a vertical plate, 366
work and, 362, 936
Fluid pressure, 365–367
Flux
across plane curve, 937–938
across rectangle boundary, 957–958
calculation of, 959, 980–981
vs. circulation, 937
definition of, 937, 979
surface integral for, 980–981
Flux density (divergence), of vector field, 958, 998–999
Foci, 649–652
Forces, work done by
addition of, 674–675
constant, 362, 363
field of, 934
variable along line, 362–363
work done by
over curve in space, 934–936
through displacement, 686–687
Free-fall formula, 56, 144–145
Free fall, Galileo's law for, 56, 144–146
Frenet frame
computational formulas, 749
definition of, 745
torsion in, 746–747
Frenet, Jean-Frédéric, 745
Fubini, Guido, 853
Fubini's theorem for double integrals, 842–854, 857–859, 869, 875
Functions
absolute value, 22–23
addition of, 32–33
algebraic, 28
arcsine and arccosine, 435–436
arrow diagram of, 20, 760
combining of, 32–36
common, 25–29
component, 716
composition (*See* Composition of functions)
constant, 25, 65, 133
continuity of, 91, 718, 771
continuous, 93–94, 272–274
at endpoint, 91
extension of, 98–99
over a closed interval, 92
at point, 91–93, 718, 771
continuously differentiable, 354, 358, 627–628
cosine, 40–41, 153–154
critical point of, 205, 817
cube root, 26
cubic, 27
decreasing, 23–24, 215–216
defined by formulas, 32
defined on surfaces, 791–793
definition of, 19
dependent variable of, 19, 759
derivative of, 120, 124–129, 719
from derivatives, graphical behavior of, 227–228
discontinuity of, 92–93
domain of, 19–20, 32, 759, 760
even, 24–25
exponential (*See* Exponential functions)
extreme values of, 201–206, 816–822, 828, 830–831
gradient of, 800
graphing with software, 47–50
graphs of, 21–29, 32–36, 762
greatest integer, 23
growth rates of, 454–456
Hessian of function of two variables, 818
identity, 25, 42–44, 64, 995
implicitly defined, 166–169, 793
increasing, 23–24, 215–216
independent variable of, 19, 759
input value of, 19
input variable of, 759
integer ceiling, 23
integer floor, 23
integrable, 285–286, 726, 851, 874
inverse (*See* Inverse functions)
least integer, 23
left-continuous, 91
limit of, 63–70, 768
linear, 25
linearization of, 180–183, 809–811
logarithmic, 29 (*See also* Logarithmic functions)
machine diagram of, 20
of many variables, 795
marginal cost, 146–147
maximum and minimum values of, 201, 203–204, 216, 820–822
monotonic, 215–218
of more than two variables, 773, 780–781, 812–813
multiplication of, 32
natural domain of, 20
natural exponential, definition of, 405
natural logarithm, 396–398
nondifferentiable, 127–128
nonintegrable, 285, 286
nonnegative area under graph of, 289–291
numerical representation of, 22, 24
odd, 24–25
output value of, 19
output variable of, 759
piecewise-continuous, 285
piecewise-defined, 22–23
piecewise-smooth, 943
polynomial, 26, 27
position, 23
positive, area under graph of, 274
potential, 943
power, 25–26, 133, 134
proportional relationship of, 25
quadratic, 27
range of, 19–20, 759, 760
rational, 27 (*See also* Rational functions)
real-valued, 20, 716, 759
reciprocal, derivative of, 125
representation as power series, 589–590
right-continuous, 91
scalar, 716
scaling of, 34–36
scatterplot of, 22
of several variables, 759–764
shift formulas for, 34
sine, 40–41, 152–153
smaller order, 456
in space, average value of, 881
square root, 26
symmetric, 24–25, 316–317, 639
of three variables, 762–764, 790–791, 804
total area under graph of, 304
trigonometric (*See* Trigonometric functions)
of two variables, 760–761, 764, 785
Chain Rule(s) for, 788–790
Increment Theorem of, 785
limits for, 767–771
linearization of, 809–811
partial derivatives of, 759–764, 776–778
unit step, 65–66
value of, 20
values, limits of, 63–66
vector (*See* Vector functions)
velocity, 270, 729
vertical line test for, 22
Fundamental Theorem of Algebra, AP-32–AP-33
Fundamental Theorem of Calculus
evaluating definite integrals, 465

for line integrals, 923
Part 1 (derivative of integral), 297–299, 398
proof of, 298
Part 2 (Evaluation Theorem)
Net Change Theorem, 300
proof of, 300–301
path independence and, 943
Fundamental Theorem of Line Integrals, 944

G

Gabriel's horn, 522
Galileo Galilei, 56
Gamma function, 528–529
Gauss, Carl Friedrich, 278, 673
Gauss's Law, 1005–1006
General linear equation, AP-13
General Power Rule for derivatives, 134, 408–409
General sine function, 45
General solution of differential equation, 252, 417
Genetic data, and sensitivity to change, 148
Geometric mean, 212, 414, 834
Geometric series
convergence of, 545
definition of, 545–547
Geometry in space, 667–708
Gibbs, Josiah Willard, 736
Global (absolute) maximum, 201, 820–822
Global (absolute) minimum, 201, 820–822
Gradient Theorem, Orthogonal, for constrained extrema, 828
Gradient vectors
algebra rules for, 803
curl of, 995
definition of, 800
directional derivatives and, 798–805
fields
conservative fields as, 945
definition of, 930–931
to level curves, 802–803
Graphing windows, 47–50
Graphing, with software, 47–50
Graphs
asymptotes of, 101–111
of common functions, 25–29
connectedness and, 97
of derivatives, 126–127
of equation, AP-10
of functions, 21–23, 32–38, 762
with several variables, 762
with three variables, 762–764
with two variables, 762
of parametric equations, 641
in polar coordinates, 635–636, 638–641
of polar curves, 641
of sequence, 532
surface area of, 973
symmetric
about origin, 639
about *x*-axis, 639
about *y*-axis, 639
symmetry tests for, 639
technique for, 641
Grassmann, Hermann, 676
Gravitational constant, 752
Gravitational field
definition of, 942
vectors in, 930
Gravitation, Newton's Law of, 751
Green's formulas, 1010
Green's Theorem
area by, 963–964
circulation curl or tangential form, 959, 987, 1008
comparison with Divergence Theorem, 998, 1008
comparison with Stokes' Theorem, 987, 1008
divergence or normal form of, 959, 999, 1008
to evaluate line integrals, 960–961
forms for, 958–960
generalization in three dimensions, 1008
in plane, 953–962
proof of, for special regions, 961–962

H

Half-open finite interval, AP-3
Harmonic functions, 1010
Harmonic series
alternating, 571–573
definition of, 553
Heat diffusion equation, 1010
Heat equation, 788
Heaviside, Oliver, 493
Height, maximum in projectile motion, 729
Helix, 717
Hessian of function, 818
Higher-order derivatives, 783–784, 1016
Homogeneous equations, 17-1, 17-2–17-5
Huygens, Christian, 620
Hydrodynamics, continuity equation of, 1006–1007
Hyperbolas
branches of, 647
center of, 650
definition of, 650
directrices, 656
eccentricity of, 650
equation of, in Cartesian coordinates, 656–657
focal axis of, 650
foci of, 650
polar equation of, 657
standard-form equations for, 650–652
vertices of, 650
Hyperbolic paraboloid, 705–706
Hyperboloids, 704, 705, 707

I

i-component of vector, 676
Identity function, 25, 64, 995
Image, 906
Implicit differentiation
Chain Rule and, 793–795
formula for, 793
technique for, 166–169
Implicit Function formula, 971
Implicit Function Theorem, 793
Implicitly defined functions, 166–169
Implicit surfaces, 970–971
Improper integrals, 465
approximations to, 520
calculating as limits, 512–520
with a CAS, 517–518
convergence of, 513
of Type I, 513
of Type II, 516
Increasing function, 23–24, 215–216
Increments, AP-10–AP-13
Increment Theorem for Functions of Two variables, 785, AP-50–AP-52
Indefinite integrals
definition of, 254–255, 407
evaluation with substitution rule, 308–312
Independent variable of function, 19, 759
Indeterminate form 0/0, 425–427
Indeterminate forms of limits, 425–429, 605–606
Indeterminate powers, 429–430
Index of sequence, 531
Index of summation, 277
Inductance, 17-19
Induction, mathematical, AP-6–AP-9
Inequalities
rules for, AP-1
solving of, AP-3–AP-4
Inertia, moments of, 887–889
Infinite discontinuities, 93
Infinite (unbounded) intervals, 24, AP-3
Infinite limits, 107–108
definition of, precise, 108–109
description and examples, 107–109
of integration, 513–515
Infinite right-hand limit, 114
Infinite sequence, 530–539. *See also* Sequences
Infinite series, 543–550
Infinitesimals, AP-26
Infinity
divergence of sequence to, 533
limits at, 101–102, 101–108, 107–109
and rational functions, 103
Inflection, point of, 205, 221–223
Initial conditions, 17-5–17-6
Initial point
of parametric curve, 616
of vector, 672
Initial ray in polar coordinates, 635
Initial speed in projectile motion, 728
Initial value problems
definition of, 252
and differential equations, 252, 1018
separable differential equations and, 416–417
Input value of function, 19
Input variable of function, 759
Instantaneous rates of change, 60–61
derivative as, 142
tangent lines and, 60–61
Instantaneous speed, 56–58
Instantaneous velocity, 143
Integer ceiling function (Least integer function), 23
Integer floor function (Greatest integer function), 23
Integers, AP-2
description of, AP-26
positive, power rule for, 133–134
starting, AP-8
Integrable functions, 285–286, 851, 874
Integral form, product rule in, 470–475

Integrals, definite. *See* Definite integrals
approximation of by lower sums, 267
approximations to, 520
Brief Table of, 466
double (*See* Double integrals)
exponential change and, 415–416
of hyperbolic functions, 447–448
improper, 465, 512–520
indefinite, 307–312
involving $\log_b x$, 412
iterated, 852
line (*See* Line integrals)
logarithm defined as, 396–402
by midpoint rule, 268
multiple, 850–914
nonelementary, 501, 603–604
polar, changing Cartesian integrals into, 870–872
in polar coordinates, 868–869
of powers of tan x and sec x, 481–482
of a rate, 301–302
repeated, 852
by Riemann sum, 280–282
by Simpson's Rule, 505–506
substitution in, 308–312, 314, 906–907
surface, 975–983, 988
table of, 497–498
by Trapezoidal Rule, 503–505
trigonometric, 478–483
of trigonometric functions, 401–402
triple (*See* Triple integrals)
of Type I, 513
of Type II, 516
by upper sums, 267
of vector fields, 931–932, 979
of vector functions, 725–727
Integral sign, 254
Integral tables, 497–498
Integral test
for convergence of series, 553–556
error estimation, 556–557
remainder in, 557
Integral theorems, for vector fields, 1007–1008
Integrands
definition of, 254
and differentiation, relationship between, 302–303
of inverse functions, 441–442
with respect to y, area between curves, 319–321
with substitution, 307–308, 314
by trigonometric substitution, 441–442
variable of, 285
with vertical asymptotes, 516–517
Integrate command (CAS), 548–550
Integration, limits of. *See* Limits of integration
basic formulas, 466
with CAS, 499–501
in cylindrical coordinates, 894–898
of inverse functions, 477
numerical, 503–510
by parts, 470–475
of rational functions by partial fractions, 489–495
in spherical coordinates, 900–902
techniques of, 465–529
term-by-term for power series, 585–586
by trigonometric substitution, 484–487
in vector fields, 922–1008
of vector function, 726–727
Interior point, 84, AP-3
continuity at, 91
finding absolute maximum and minimum values, 821
for regions in plane, 761
for regions in space, 763
Intermediate Value Property, 96
Intermediate Value Theorem, 96
continuous functions and, 96–98, 296, 397, AP-24
monotonic functions and, 215
Intermediate variable, 789
Intersection, lines of, 699–700
Intersection of sets, AP-2
Interval of convergence, 583
Intervals
definition of, AP-3
differentiable on, 127–128
parameter, 616–617
types of, AP-3
Inverse equations, 411
Inverse function-inverse cofunction, 440
identities, 440
Inverse functions
definition of, 389
derivative rule for, 392
and derivatives, 392–393
of exponential functions, 29
finding, 390–391
hyperbolic, 448–449, 486
and integrating, 477
trigonometric (*See* Inverse trigonometric functions)
Inversely proportional, 25
Inverses
finding of, 390–391
integration and differentiation operations, 303–304
of ln x and number e, 404–406
for one-to-one functions, 388–389
Inverse trigonometric functions
definition of, 434–435
derivatives of, 438–441
study of, 434–442
Irrational numbers
definition of, AP-2
Irreducible quadratic polynomial, 490
Iterated integral, 852

J

Jacobian determinant, 907, 910–912
Jacobi, Carl Gustav Jacob, 906
j-component of vector, 676
Jerk, 144, 145
Joule, James Prescott, 362
Joules, 362
Jump discontinuity, 93

K

k-component
of curl, 953–956
of vector, 676
Kepler, Johannes, 753
Kepler's First Law (Ellipse Law), 752
Kepler's Second Law (Equal Area Law), 752–753
Kepler's Third Law (Time-Distance Law), 753–754
Kinetic energy and work, 369
Kirchhoff, Gustav R., 17-19
Korteweg-deVries equation, 788
Kovalevsky, Sonya, 450, 841
kth subinterval of partition, 268, 281

L

Lagrange, Joseph-Louis, 210, 825
Lagrange multipliers
method of, 828–832
partial derivatives and, 825–832
solving extreme value problems, 821
with two constraints, 831–832
Laplace equation, 787
Laplace, Pierre-Simon, 782
Launch angle, 728
Law of cooling, Newton's, 421–422
Law of cosines, 43–44, 659, 682
Law of refraction, 236
Laws of exponents, 407–408
Laws of logarithms, 399–400
Least integer function, 23
Least upper bound, 538, AP-24
Left-continuous functions, 91
Left-hand derivatives, 127–128
Left-handed coordinate frame, 667
Left-hand limits, 83
definition of, 85
informal, 83–84
precise, 85–86
Leibniz, Gottfried, 308, AP-25
Leibniz's formula, 605
Leibniz's notation, 126, 160, 161, 180, 199, 284, 628
Leibniz's Rule, 284
for derivative of an integral, 330
Length
along curve in space, 734–736
constant, vector functions of, 722
of curves, 351–353, 627–630
of parametrically defined curve, 627–630
of polar coordinate curve, 644–645
of vector (magnitude), 673–675
Lenses, light entering, 168–169
Level curves, of functions of two variables, 762
Level surface, of functions of three variables, 762
L'Hopital, Guillaume de, 425
L'Hopital's Rule
finding limits of sequences by, 535–536
indeterminate forms and, 425–431
proof of, 431
Limit Comparison Test, 519, 520, 561–563
Limit Laws, 66–67, AP-19
for functions with two variables, 769
limit of a function and, 63–67
theorem, 66, 103
Limit Power Rule, 66, 67
Limit Product Rule, proof of, AP-19–AP-20
Limit Quotient Rule, proof of, AP-20–AP-21
Limit Root Rule, 66, 67
Limits, 56–111
calculators and computers to estimate, 68–69
commonly occurring, 537, AP-22–AP-23
continuity and, 56–111

of continuous functions, 90–99, 95
for cylindrical coordinates, 895–897
for definite integrals, 314–316
definition of informal, 63–66
deltas, finding algebraically, 77–79
of difference quotient, 121
e (the number) as, 409–410
estimation of, calculators and computers for, 68–69
finding of, for multiple integrals, 859–860, 869–870, 875–881, 895–899
finite, 101–102
of finite sums, 279–280
f-limits of integration, finding of, 895
for functions of two variables, 767–769
of function values, 61–67
general definition of, 119
infinite, 101–103, 513–515
at infinity, 101–102, 101–103, 101–108, 107–109
of integration for cylindrical coordinates, 895–898
left-hand (*See* Left-hand limits)
nonexistence of, two-path test for functions of two variables, 772
one-sided, 83
for polar coordinates, 869–870
of polynomials, 67
power rule for, 66
precise definitions of, 74–79, 108–109
proving theorems with, 79
of rational functions, 67, 103
for rectangular coordinates, 875–881
of Riemann sums, 283
right-hand (*See* Right-hand limits)
r-limits of integration, finding of, 897
root rule for, 66
Sandwich Theorem, 69–70
of sequences, 534–536
for spherical coordinates, 899
testing of, 75–79
two-sided, 83
of (sin u)/u, 86–88
of vector-valued functions, 717–718
ϕ-limits of integration, 897
Linear approximations, 181
error formula for, 811, 836
standard, 181, 810–811
Linear equations general, AP-13
Linear functions, 25
Linearity, 17-20
Linearization
definition of, 181, 810
differentials and, 180–189
of functions of two variables, 809–812
Linearly independent solutions, 17-2
Linear transformations, 908
Line integrals
additivity and, 924–925
definition for scalar functions, 923
evaluation of, 923, 932
fundamental theorem of, 944
by Green's Theorem, 960–961
integration in vector fields, 922–927
interpretation of, 926–927
mass and moment calculations and, 925–926
in plane, 926–927
of vector fields, 929–938
xyz coordinates and, 933
Lines
of intersection, for planes, 699–700
masses along, 371–372
motion along, 142–146
normal, 168–169
tangent planes and, 806–808
parallel, AP-13
parametric equations for, 696–698
perpendicular, AP-13
and planes, in space, 698–700
polar equation for, 559
secant, 58
skew, 712
straight equation lines, 696
tangent, 60–61, 120
vector equations for, 696–698
vertical, shell formula for revolution about, 346
work done by variable force along, 362–363
Line segments
directed, 672
midpoint of, finding with vectors, 677
in space, 695–700
Liquids, incompressible, 958
ln *bx,* 399
ln *x*
derivative of, 398
graph and range of, 400
integral of, 405
inverse equation for, 405
inverse of, 404–406
and number e, 397, 404–405, 404–406
Local extrema
first derivative test for, 216–218
first derivative theorem for, 204
second derivative test for, 223–228
Local extreme values
definition of, 203–204, 816
derivative tests for, 202–203, 816–820
first derivative theorem for, 204–205, 817
Local (relative) maximum, 203–204, 816, 822
Local (relative) minimum, 203–204, 816, 822
Logarithmic differentiation, 402
Logarithmic functions, 29
with base *a,* 411
change of base formula and, 411
description of, 29
natural, 396–397
Logarithms
algebraic properties of, 399
with base *a,* 411, 412
defined as integral, 396–402
integral of, 412
inverse functions and, 404–406
inverse properties of, 411
laws of, proofs of, 399–400
natural, 396–397
properties of, 399–400
$\log_a u$, derivative of, 412
$\log_a x$
derivatives and integrals involving, 412
inverse equations for, 411
Logistic population growth, 1041–1042
Loop, 937
Lorentz contraction, 116
Lower bound, 289
Lower sums, 267

M

Machine diagram of function, 20
Maclaurin, Colin, 590
Maclaurin series, 590–592
Magnitude (length) of vector, 672, 673
Marginal cost, 146–147, 236
Marginal profit, 236
Marginal revenue, 236
Marginals, 146
Mass. *See also* Center of mass
along line, 371–372
distributed over plane region, 373
formulas for, 371, 372, 377–378, 885, 926
by line integral, 926
and moment calculations line integrals and, 925–926
moments of, 374
multiple integrals and, 885, 887
of thin shells, 981–983
of wire or thin rod, 925–926
Mass to energy equation, 189
Mathematical induction, AP-6–AP-9
Maximum, 816
absolute (global), 201, 820–822
constrained, 825–828
local (relative), 203–204
Max-Min Inequality Rule for definite integrals, 287, 289, 296–297
Max-Min Tests, 216–217, 224, 817, 820–822
Mean. *See* Expected value
Mean value. *See* Average value
Mean Value Theorems, 210–212, 215, 358, 399
Cauchy's, 430–431
corollary 1, 211
corollary 2, 212, 399
corollary 3, 215
for definite integrals, 296–297
for derivatives, 210
interpretation of, 211, 296
laws of logarithms, proofs of, 210–211
mathematical consequences of, 211–212
for parametrically defined curves, 627
proof of, 210–211
Mendel, Gregor Johann, 148
Mesh size, 503
Method of slicing, 332
Midpoint of line segment in space, finding with vectors, 677
Midpoint rule, 268, 269
Minimum
absolute (global), 201, 820–822
constrained, 825–828
local (relative), 203–204, 816, 822
Mixed Derivative Theorem, 783, AP-49–AP-50
Mobius band, 979
Moments
and centers of mass, 371–381, 885–891, 926, 982
first, 885–886, 982
of inertia, 887–889, 982
and mass calculations, line integrals and, 925–926
of solids and plates, 887
of system about origin, 372
of thin shells, 981–983
of wires or thin rods, 925–926
Monotonic functions, 215–218
Monotonic sequences, 538–539

Monotonic Sequence Theorem, 539
Motion
  along curve in space, 718–720, 745
  along line, 142–146
  antiderivatives and, 252–253
  direction of, 720
  in polar and cylindrical coordinates, 751
  with resistance, 1030–1031
  simple harmonic, 154–155
  vector functions and, 716, 718–720
Multiplication
  of complex numbers, AP-30
  of functions, 32
  of power series, 583–584
  scalar, of vectors, 674–675
Multiplier (Lagrange), 821, 825–832

N

Napier, John, 399
Natural domain of function, 20
Natural exponential function
  definition of, 405
  derivative of, 406–407
  graph of, 400
Natural logarithm function
  algebraic properties of, 399
  definition of, 396–397
  derivative of, 399
Natural logarithms, 396–397
Natural numbers, AP-2, AP-26
Net Change Theorem, 300
Newton-Raphson method, 244–245
Newton, Sir Isaac, 296, AP-25
Newton's law of cooling, 421–422, 1039
Newton's law of gravitation, 751–752
Newton's method, 244–247
  applying, 245–247
  convergence of approximations, 247
  procedure for, 245
Newton's second law, 188, 1040
Nondecreasing partial sums, 553
Nondecreasing sequences, 538
Nondifferentiable function, 127–128
Nonelementary integrals, 501, 603–604
Nonintegrable functions, 285–286
Nonhomogeneous equations, 17-1, 17-7–17-11
Normal component of acceleration, 744–749
Normal distribution, AP-42
  standard form of, AP-44
Normal line, 168–169, 807
Normal plane, 747
Normal vector, 742–743
Norm of partition, 282, 851, 895
Notations, for derivative, 126, 777–778
*n*th derivative, 139
*n*th partial sum, 543–544
*n*th-term test for divergence, 547–548
Numerical integration, 503–510
Numerical representation of functions, 22

O

Oblique (slant) asymptote, 106
Octants, 667
Odd functions, 24–25
Ohm's law, 17-19
One-sided derivatives, 127–128
One-sided limits, 83. *See also* Left-hand limits; Right-hand limits
  definition of
    informal, 83–84
    precise, 85–86
  derivatives at endpoints, 127–128
  involving (sin u) u, 86–88
One-to-one functions, 388–389
  horizontal line test for, 389
Open region, 761, 763
Optics
  Fermat's principle in, 235, 236
  Snell's Law of, 236
Optimization, applied. *See* Applied optimization
Orbital period, 753
Order and Oh-notation, 456–457
Ordered field, AP-24
Order of Integration Rule, 287
Order properties, of real numbers, AP-1, AP-23
Oresme, Nicole, 532
Orientable surface, 979
Origin
  of coordinate system, AP-10
  moment of system about, 372
  in polar coordinates, 635
Orthogonal gradient theorem, 828
Orthogonal trajectories, 1032–1033
Orthogonal vectors, 683–684
Oscillating discontinuities, 93
Osculating circle, 741
Osculating plane, 747
Output variable of function, 759
Outside-Inside interpretation of chain rule, 161, 805
Overdamping, 17-18

P

Paddle wheel, 991–994
Pappus' theorems, 379–381
Parabola(s)
  approximations by, 505–506
  Archimedes' formula, 306
  axis of, 648, AP-15
  definition of, 648
  directrix of, 648
  eccentricity of, 656
  focal length of, 648
  focus of, 648
  parametrization of, 618
  semicubical, 171
  vertex of, 648, AP-15
Paraboloids
  definition of, 705
  elliptical, 707
  hyperbolic, 705, 707
  volume of region enclosed by, 875
Parallel axis theorem, 892
Parallel lines, 699, AP-13
Parallelogram
  area of, 690–691
  law of addition, 674, 682
Parallel planes
  lines of intersection, 699–700
  slicing by, 333–334
Parallel vectors, cross product of, 689
Parameter domain, 616, 965
Parameter interval, 616
Parameters, 616, 965
Parametric curve
  arc length of, 630–631, 734–736
  calculus with, 625–632
  definition of, 616
  differentiable, 625
  graphing, 617–618, 641
Parametric equations
  of circle, 618, 628
  for curves in space, 716
  of cycloid, 620
  definition of, 616
  of ellipse, 629
  graphing, 617–619
  of hyperbola, 619, 625
  of lines, 696–698
  for projectile motion, 727–729
Parametric formulas, for derivatives, 625
Parametrization
  of cone, 966
  of curves, 616–620, 716
  of cylinder, 966
  of line, 696–698
  of sphere, 966
  and surface area, 966–970
  of surfaces, 965–966
Partial derivatives
  calculations of, 779–780
  Chain Rule for, 788–795
  with constrained variables, 839
  and continuity, 771–773
  continuous, identity for function with, 995
  definitions of, 777
  equivalent notations for, 777
  extreme values and saddle points, 816–822
  of function of several variables, 753–754
  of function of two variables, 776–778
  gradient vectors and, 798–805
  higher-order, 783–784
  Lagrange multipliers, 827–831
  at a point, 120–122
  second-order, 782
  tangent planes and, 806–813
Partial fractions
  definition of, 489
  integration of rational functions by, 489–495
  method of, 490–494
  *n*th of series, 543–544
  sequence of, 544
Partial sums nondecreasing, 553
Particular solution, of differential equation, 252, 1017
Partitions
  definition of, 850–851
  *k*th subinterval of, 281
  norm of, 282, 851
  for Riemann sums, 280–282
Parts, integration by, 470–475
Pascal, Blaise, 544
Path independence, 942–943
Path of particle, 716
Pendulum clock, 620
Percentage change, 188
Periodicity, of trigonometric functions, 42
Period of a pendulum, 165, 199
Perpendicular lines, AP-13
Perpendicular (orthogonal) vectors, 683–684
Phase planes, 1043–1044
Physics, examples of applied optimization from, 234–236
Pi (π)
  recursive sequence for, 541
  series sum and, 555, 586, 605
Piecewise-continuous functions, 285, 328–329

Piecewise-defined functions, 22–23
Piecewise-smooth curves, 719, 943
Piecewise-smooth surface, 976, 987
Pinching Theorem. *See* Sandwich Theorem
Plane areas for polar coordinates, 642–644
Plane curves
  circle of curvature for, 741–742
  lengths of, 351–355
  parametrizations of, 616–620
Plane regions
  boundary point, 761
  bounded, 761
  interior point, 761
  masses distributed over, 373
Planes
  angles between, 702
  Cartesian coordinates in, AP-9–AP-10
  directional derivatives in, 798–799
  distance and circles in, AP-13–AP-15
  equation for, 699
  Green's Theorem in, 953–962
  horizontal tangent to surface, 816
  line integrals in, 926–927
  lines of intersection for, 699–700
  motion of planets in, 751–752
  normal, 747
  osculating, 747
  parallel, 699
  rectifying, 747
  in space, 695–700
Plane tangent to surface, 807, 808
Planetary motion
  Kepler's First Law (Ellipse Law) of, 752
  Kepler's Second Law (Equal Area Law) of, 752–753
  Kepler's Third Law (Time-Distance Law) of, 753–754
  as planar, 751–752
Plate(s)
  bounded by two curves, 377–378
  thin flat, center of mass of, 374–377
  two-dimensional, 885, 888
Points
  boundary, 763
  of discontinuity, definition of, 91–92
  of inflection, 205, 221–223
  interior, 763
  in three-dimensional Cartesian coordinate system, distance to plane, 701
Point-slope equation, 60, AP-12
Poiseuille's formula for blood flow, 191
Poisson, Simeon-Denis, 816
Polar coordinates
  area in, 870
  area of polar region, 642–644
  Cartesian coordinates related to, 634–637
  of conic sections, 647–649
  conics in, 647–652
  definition of, 635
  graphing of, 635–636, 638–641
  initial ray of, 635
  integrals in, 868–869
  length of polar curve, 644–646
  of lines, 659
  motion in, 751
  pair, 635
  pole in, 635
  slope of polar curve, 639–640
  symmetry tests for, 639
  velocity and acceleration in, 750–751
Polar equations of circles, 659–660
Polyhedral surfaces, 994–995
Polynomial functions, definition of, 26, 27
Polynomials, 26–27
  coefficients of, 26–27
  degree of, 27
  derivative of, 136, 139
  limits, evaluating, 67
  limits of, 67
  quadratic irreducible, 490
  Taylor, 591–593, 598, 599
Population growth logistic, 1043
Position function, acceleration and, 212–213
Position, of particle in space over time, 716
Position vector, 673
Positive integers
  definition of, AP-26
  derivative power rule for, 133–134
Potential function, 943
Potentials, for conservative fields, 947–949
Power Chain Rule, 161–163, 167
Power functions, 25–26
Power Rule, 66–67
  for derivatives, general version of, 134, 408–409
  for limits, 66, 67
  for limits of functions of two variables, 769
  natural logarithms, 399
  for positive integers, 133–134
  proof of, 133–134, 408–409
Powers
  binomial series for, 601–603
  of complex numbers, AP-31
  of sines and cosines, products of, 478–480
Power series
  convergence of, 578–581
  multiplication of, 583–584
  operations on, 583–586
  radius of, 581–583
  term-by-term differentiation of, 584
  term-by-term integration of, 585–586
  testing of, 579–583
Power-series solutions, 17-24–17-29
Preimage, 906
Pressure depth equation, 365
Principal unit normal vector, 742, 749
Probability
  of a continuous random variable, 891, AP-34
    mean, AP-38–AP-39
    median, AP-44–AP-45
    standard deviation, AP-41
    variance, AP-41
  density function, 890, AP-36, AP-37
  distributions, AP-35–AP-37
    exponentially decreasing, AP-37–AP-38
    normal, AP-42
    uniform, AP-42, AP-34–AP-35
  random variables, 890–891, AP-34–AP35
Product Rule, 66–67
  for derivatives, 136, 155, 217
  for gradient, 803
  in integral form, integration by parts, 470–475
  for limits, 66, 67
    of functions with two variables, 769
    proof of, 137
  for natural logarithms, 399
  for power series, 583–584
  for sequences, 534
Products
  of complex numbers, AP-30
  of powers of sines and cosines, 478–480
  and quotients, derivatives of, 136–138
  of sines and cosines, 482–483
Projectile motion, vector and parametric equations for, 727–729
Projection, of vectors, 684–686
Proportional relationship of functions, 25
p-series, 555–556
Pyramid, volume of, 333–334
Pythagorean theorem, 42, 44, 436, AP-13, AP-26
Pythagorean triples, 541

Q

Quadrants, of coordinate system, AP-10
Quadratic approximations, 594
Quadratic functions, 27
Quadratic polynomial, irreducible, 490
Quadric surfaces, 704–708
Quotient products and, derivatives of, 136–138
Quotient Rule
  of complex numbers, AP-30
  for derivatives, 137–138, 155–156, 572
  for gradient, 803
  for limits, 66, 67, 69
    of functions with two variables, 769
    proof of, AP-20–AP-21
  for natural logarithms, 399
  for sequences, 534
Quotients for complex numbers, AP-30–AP-31

R

Radian measure and derivatives, 163
Radians, 39–41
Radioactive decay, 420–421
Radioactive elements, half-life of, 420
Radioactivity, 420–421
Radius
  of circle, AP-14
  of convergence, 583
  of convergence of power series, 581–583
  of curvature, for plane curves, 741–742
  units, 39
Range, 19
  of function, 19–20, 759, 760
  in projectile motion, 729
Rate(s)
  average, 58
  of change, 56–59
    circulation density, 955
    flux density, 958, 998
  constant, exponential change, 416
  instantaneous, derivative as, 60–61, 142
  integral of, 301–302
Ratio, in geometric series, 545
Rational functions, 67
  definition of, 27
  domain of, 27
  integration of, by partial fractions, 489–495
  limits of
    evaluating, 67
    at infinity, 103
Rational numbers, AP-2, AP-26
Rational operations, AP-26
Ratio Test, 566–567, 579–580, 583, 602

Real numbers
construction of reals and, AP-59, AP-26
properties of
algebraic, AP-1, AP-23
completeness, AP-1–AP-2, AP-24
order, AP-1, AP-23
and real line, AP-1
theory of, AP-23–AP-26
Real-valued functions, 20, 716, 759
Rearrangement theorem, for absolutely convergent series, 574
Reciprocal function, derivative of, 125
Reciprocal Rule for natural logarithms, 141, 399
Rectangles
approximating area with, 267–269
defining Riemann sums, 281–282
double integrals over, 850–854
Rectangular coordinates. *See* Cartesian coordinates
Rectifying plane, 747
Recursion formula, 537
Recursive definitions, 537
Reduction formula, 474–475, 498–499
Reflection of graph, 34–36
Regions
bounded, 761
closed, 761, 763
connected, 943
general, double integrals over, 855–861
open, 761, 763, 995–996
plane
interior point, 761
masses distributed over, 373
simply connected, 943
solid, volume of, 856–859
in space
interior point, 763
volume of, 875
special
divergence theorem for, 1002–1003
Green's Theorem for, 961–962
unbounded, 761
Regression analysis, least squares, 825
Reindexing infinite series, 549–550
Related rates, 171–176
Relative change, 188
Relative (local) extrema, 203–204, 816–817
Relative rates of growth, 454–458
Remainder
estimating of, in Taylor's Theorem, 595–597
in integral test, 556–557
of order n, definition for Taylor's formula, 595
Remainder Estimation Theorem, 596, 598
Removable discontinuities, 93
Representation of function, power series, 578–586
Resistance, 17-19
Rest points, 1037
Resultant vector, 674
Revenue, marginal, 147
Revolution
about y-axis, 336
areas of surfaces of, 356–359, 632
ellipsoid of, 705
Shell formula for, 346
solids of
disk method, 334–337
washer method, 337–339
surface of, 356
Riemann, Georg Friedrich Bernhard, 280
Riemann sums
concept overview, 280–282
convergence of, 285
forming, 285
for integrals, 374
limits of, 284–285
line integrals and, 922
slicing with cylinders, 344
for surface integrals, 976
for triple integrals, 895, 899
volumes using
cross-sections, 332
cylindrical shells, 344
work and, 362
Right-continuous functions, 91
Right-handed coordinate frame, 667
Right-handed derivatives, 127–128
Right-hand limits, 83
definition of, 83–85
proof of, AP-21
Rise, AP-11
r-limits of integration, 869, 897
Rolle, Michel, 209
Rolle's Theorem, 209–210
Root finding, 97
Root Rule, for limits, 66, 67
of functions of two variables, 769
Roots
binomial series for, 601–603
of complex numbers, AP-31–AP-32
finding by Newton's Method, 244–245
and Intermediate Value Theorem, 97–98
Root Test, 568–569, 583
Rotation
disk method, 334–337
uniform, 958
Run, AP-11

S

Saddle points, 706, 817–818, 822
Sandwich Theorem, 69–70
limits at infinity, 105
limits involving (sin u) u, 86
proof of, AP-21
for sequences, 535
statement of, 69–70
Scalar functions, 716
Scalar Multiple Rules for vector functions, 721
Scalar multiplication of vectors, 674–675
Scalars, definition of, 674
Scaling, of function graph, 34–36
Scatterplot, 22
Schwarz's inequality, 265, 688
Secant function
extended definition of, 40–41
integral of, 402
inverse of, 437–438
Secant line, 58
Secant slope, 58
Secant, trigonometric function, 40
Second derivative, 139
Second Derivative Test
for concavity, 221
derivation of, two-variable function, 835–836
for local extrema, 223–228
summary of, 821, 822
Second moments, 888–889
Sec x
derivative of, 155
integral of, 401–402, 481–482
inverse of, 437–438
Semicubical parabola, 171
Separable differential equations, 415–418
Sequences
bounded, 538–539
calculation of, 534–535
by Continuous Function Theorem, 535
convergence of, 532–534
divergence of, 532–534
index of, 531
infinite, 530–539
by l-Hopital's Rule, 535–536
limits of, 534–535
monotonic, 538
to negative infinity, 533
nondecreasing, 538
of partial sums, 543
recursively defined, 537
by Sandwich Theorem, 535
zipper theorem for, 542
Sequential search, 457–458
Series
absolutely convergent, 565
adding or deleting terms, 549
alternating, 571–573
binomial, 601–603
combining, 548–549
conditionally convergent, 573–574
convergence of, comparison tests for, 559–561
convergent, 544
divergent, 547–548
error estimation, 556–557
geometric, 545–547
harmonic, 553, 555, 571–573
infinite, 543–550
integral test, 553–556
Maclaurin, 590–591
p-, 555–556
partial sum of, 543–544
power, 578–586
rearrangement of, 574–575
reindexing, 549–550
representations, of functions of power, 578–586
sum of, 553
Taylor, 589–599
tests
for absolute convergence, 565
alternating, 571–573
Cauchy condensation, 559
comparison, 560
convergence, 559–561
integral, 553–556
limit comparison, 561–563
Raabe's, 614
ratio, 566–567
root, 568–569
summary of, 575
Set, AP-2
Shearing flow, 955
Shell formula for revolution, 346
Shell method, 345–348

Shells, thin, masses and moments of, 981–983
Shift formulas for functions, 34
Shifting, of function graph, 34
Short differential formula, arc length, 354–355
Sigma notation, 276–282
Simple harmonic motion, 154–155
Simply connected region, 943
Simpson's Rule
  approximations by, 505–509
  error analysis and, 507–509
Simpson, Thomas, 506
Sine(s)
  extended definition of, 40–41
  integrals of products of, 482–483
    powers of, 478–480
  values of, 41
Sine function
  derivative of, 152–153
  graph of, 28
  integral of, 478
  inverse of, 435–436
Sine-integral function, 522
Sinusoid formula, 45
SI units, 362
Skew lines, 712
Slant line (oblique) asymptote, 106
Slicing
  with cylinders, 343–345
  by parallel planes, 333–334
  volume by, 332–334
Slope
  of curve, 58–60
  fields, 1018–1019
  of nonvertical line, AP-11
  of parametrized curves, 618–619
  of polar coordinate curve, 639–640
  tangent line and, 120–122
Slope-intercept equation, AP-13
Slugs, 1031
Smaller order functions, 456
Smooth curves, 21, 351–353, 627
Smooth surface, 967–968, 970
Snell's Law, 236
Snell van Royen, Willebrord, 235
Software, graphing with, 47–50
Solids
  Cavalieri's principle of, 334
  cross-section of, 332
  moments, 885, 888
  of revolution
    by disk method, 334–337
    by washer method, 337–339
  three-dimensional, masses and, 885, 888
  volume
    calculation of, 333
    by disk method, 334–337
    by double integrals, 851–852, 856–859
    by method of slicing, 332–339
    by triple integrals, 874–875
    by washer method, 337–339
Solution, of differential equation, 416, 1017
Speed
  along smooth curve, 736
  average, 56–58
  definition of, 143
  instantaneous, 56–58
  over short time intervals, 57
  of particle in space, 720
  related rates equations, 174–175
Spheres
  concentric, in vector field, 1004–1005
  parametrization of, 966
  in space, distance and, 669–670
  standard equation for, 669
  surface area of, 969–970
  triple integrals in, 898–902
Spherical coordinates definition of, 898
Spin around axis, 953–956
Spring constant, 363
Springs
  Hooke's law for, 363–364
  mass of, 925–926
  work to stretch, 363
Square root function, 26
  definition of, 26
  derivative of, 126
Square roots, elimination of, in integrals, 480–481
Squeeze Theorem. *See* Sandwich Theorem
Standard deviation, 514
Standard linear approximation, 181, 810
Standard position of angles, 40
Standard unit vectors, 676
Steady-state value, 1028
Step size, 503
Stirling's formula, 529
Stokes' Theorem
  comparison with Green's Theorem, 987, 988, 1008
  conservative fields and, 947, 995–996
  integration in vector fields, 985–996
  for polyhedral surfaces, 994–995
  surface integral in, 988
  for surfaces with holes, 995
Stretching a graph, 34–35
St. Vincent, Gregory, 647
Substitution
  and area between curves, 317–319, 414
  in double integrals, 906–911
  formula for definite integrals, 314–316
  indefinite integrals and, 308–312
  in multiple integrals, 906–914
  rectangular to polar coordinates, 868
  trigonometric, 484–487
  in triple integrals, 911–914
Substitution Rule
  in definite integrals, 314
  definition of, 309
  for double integrals, 907
  evaluation of indefinite integrals with, 307–312
  in triple integrals, 911
Subtraction, of vectors, 675
Summation, index of, 277
Sum Rule, 66
  for antiderivatives, 251
  for combining series, 548
  for definite integrals, 287
  derivative, 135–136
  for finite sums, 278
  of functions of two variables, 769
  of geometric series, 548
  for gradients, 803
  for limits, 66–67, 79
  of sequences, 534
  for vector functions, 721
Sums
  finite, estimation with, 266–274
  limits of, 276, 279–280
  lower, 267
  upper, 267
Sums, Riemann. *See also* Riemann sums
  and difference, of double integrals, 860
  finite, 574
  partial, sequence of, 543
  Riemann (*See* Riemann sums)
Superposition principle, 17-1
Surface area
  defining of, 357–359, 966–970
  differential for parametrized surface, 969
  of explicit surface, 976
  of graph, 973
  of implicit surface, 971–973, 976
  Pappus' theorem, 381
  parametrization of, 966–970
  for revolution about y-axis, 359
  for sphere, 969–970
Surface integrals
  computation of, 980–983
  for flux, 979–981
  formulas for, 976
  integration in vector fields, 975–983
  of scalar functions, 976
  in Stoke's Theorem, 988
  of vector fields, 979
Surfaces
  and area, 632, 965–973
  functions defined on, 791–793
  with holes, 995
  implicit, 970–973
  level, 762
  orientable, 979
  parametrization of, 965–966
  piecewise smooth, 976, 987
  plane tangent to, 806–808
  quadric, 704–708
  of revolution, 356
  smooth, 967–968, 970
  two-sided, 979
  of two-variable functions, 762
Symmetric functions, 24–25
  definite integrals of, 316–317
  graphs of, 24–25
  properties of, 24
Symmetry tests, for graphs in polar coordinates, 639
  u-limits of integration, finding of, 906
System torque, systems of masses, 371–372

T

Table of integrals, 466, 497–498
Tangent(s)
  to curves, 56–61, 736, 802–803
  of curves in space, 716–722
  extended definition of, 40–41
  to graph of function, 120–121
  to level curves, 802–803
  and normals, 168–169
  at point, 120–122
  slope of, 58–60
  values of, 41
  vertical, 128
Tangent function
  extended definition of, 40–41
  integrals of, 402
  inverse of, 437–438

Tangential component of acceleration, 744–749
Tangent lines, 60–61
  approximation, 180, 810
  to curve, 120
  instantaneous rates of change and, 60–61
Tangent planes
  approximation, 810
  horizontal, 817
  and normal lines, 806–808
  to a parametric surface, 967
Tangent vector, 719
Tan x
  derivative of, 155
  integral of, 401–402, 481–482
  inverse of, 437–438
Tautochrones, 621
Taylor, Brook, 590
Taylor polynomials, 591–593, 599
Taylor series
  applying of, 597–598, 601–605
  convergence of, 594–599
  definition of, 590–591
  frequently used, 607
Taylor's Formula
  definition of, 594, 595
  for functions of two variables, 835–838
Taylor's Theorem
  definition of, 594
  proof of, 599
Term-by-term differentiation, 584
Term-by-term integration, 585–586
Terminal point
  of a parametric curve, 616
  of vector, 672
Term of a sequence, 531
Term of a series, 544
Theorem(s), 211, 212, 297–301, 379–381, 399, 407
  Absolute Convergence Test, 565
  of Algebra, AP-32–AP-33
  Algebraic Properties of Natural Logarithm, 399
  Alternating Series Estimation, 573, 598
  angle between two vectors, 681
  of Calculus, Part 1, 297–299
  of Calculus, Part 2, 300–301
  Cauchy's Mean Value, 430–431
  Chain Rule, 160
  Comparison Test, 560
  conservative fields are gradient fields, 945
  Continuous function for sequences, 535
  Convergence, for Power Series, 581
  corollary 1, 211
  corollary 2, 212, 399
  curl $\mathbf{F} = \mathbf{0}$ related to loop property, 995–996
  for definite integrals, 296–297
  De Moivre's, AP-31
  Derivative Rule for Inverses, 392
  Differentiability implies continuity, 129, 785
  Direct Comparison Test, 560
  Divergence, 999–1001
  Divergence of curl, 1002
  Evaluation, 300–301
  Exactness of differential forms, 950
  Extreme Value, 202–203, AP-24
  First derivative test for local extreme values, 204–205, 817
  Formula for Implicit Differentiation, 793
  Fubini's, 856–859
  for functions of three variables, 790–791
  for functions of two variables, 789–790
  Fundamental Theorem of Calculus, 296–304
  Green's, 959
  Implicit Function, 794
  Increment, for Functions of Two Variables, 785, AP-50–AP-51
  integrability of continuous functions, 285
  Integral Test, 554
  Intermediate value, 96–98
  Laws of Exponents for e^x, 407
  l'Hopital's Rule, 425–431, 535–536
  Limit, proofs of, AP-20–AP-21
  Limit Comparison Test, 519, 561–563
  Limit Laws, 66, 103
  of Line Integrals, 944
  Loop property of conservative fields, 946
  Mean Value, 210–211, 215, 296, 351–352, 358, 627, AP-49–AP-50
  Mixed Derivatives, 783, AP-49
  Monotonic Sequence, 539
  Multiplication of power series, 583
  Net Change, 300

  Remainder Estimation, 596, 598
  Rolle's, 209–210
  Root Test, 568–569
  Sandwich, 69–70, 86, 105, 535, AP-21
  Second derivative test for local extrema, 224, 818
  Stokes', 987
  Substitution Rule, 309
  Taylor's, 594, 599
  Term-by-Term Differentiation, 584
  Term-by-Term Integration, 585–586
  for two independent variables and three intermediate variables, 790
Thickness variable, 346–347
Thin shells, moments and masses of, 981–983
Third derivative, 139
Three-dimensional coordinate systems
  Cartesian, 667–670
  coordinate planes, 667
  cylindrical, 896–898
  right-and left-handed, 667
  spherical, 900–902
Three-dimensional solid, 885, 888
Time-Distance Law (Kepler's Third Law), 753–754
TNB frame, 745
Torque, 371–372, 692–693
Torsion, 746–747, 749
Torus
  of revolution, 974
  volume of, 380
Total differential, 813
Trace curve, 784
Transcendental functions, 29, 388–458, 407
Transcendental numbers, 407
Transformations
  Jacobian of, 910, 912
  linear, 908
  of trigonometric graphs, 44–45
Transitivity law for real numbers, AP-24
Trapezoidal Rule
  approximations by, 503–505, 509–510
  error analysis and, 507–509
Trapezoid, area of, 291
Triangle inequality, AP-4
Trigonometric functions, 28
  angles, 39–40
  derivatives of, 152–156
  graphs of, 28, 42, 44–45, 48–50
  integrals of, 401–402, 478–483
  inverse, 434–442
  periodicity of, 42
  six basic, 40–41
  transformations of, 44–45
Trigonometric identities, 42–44, 311
Trigonometric substitutions, 484–487
Triple integrals, 894–902
  in cylindrical coordinates, 894–902
  properties of, 874–875, 882
  in rectangular coordinates, 874–882
  in spherical coordinates, 898–902
  substitutions in, 911–914
Triple scalar product (box product), 693–694
Trivial solution, 17-2
Tuning fork data, 22
Two-dimensional vectors, component form of, 673
Two-path test for nonexistence of limit, 772
Two-sided limits, 83
Two-sided limits, proof of, AP-21

U

Unbounded functions, 24
Unbounded intervals, 24
Unbounded region, 761
Unbounded sequence, 538
Underdamping, 17-18
Undetermined coefficients, 494
Unified theory of vector field integrals, 1007–1008
Union of sets, AP-2
Unit binormal vector, 745
Unit normal vector, 740
Unit circle, AP-14
Unit step functions, limits and, 65–66
Unit tangent vector, 736–737, 749
Unit vectors
  definition of, 676
  writing vectors in terms of, 676–677
Universal gravitational constant, 752
Upper bound, 289, AP-24
Upper sums, 267

V

Value(s)
  absolute, AP-4–AP-5, AP-29
  average, 291–292
  extreme, 201–206, 816–822
  of function, 20, 881
  of improper integral, 513–515
  local maximum, 203–204, 816
  local minimum, 203–204, 816
Variable force
  along curve, 934–936
  along line, 362–363
Variable of integration, 254, 285
Variables, 835–838

Chain Rule for, 788–790
dependent, 19
dummy, 285
functions of several, 759–764, 773, 780–781, 795
independent, 19, 788–790
and three intermediate, 790–791
input, 759
intermediate, 788
limits for, 767–771
linearization of, 809–812
output, 759
partial derivatives of, 776–778
proportional, 25
thickness, 346–347
three, functions of, 762–764, 804
two, functions of, 760–761, 764, 785
Vector equations
for curves in space, 716
for lines, 696
of plane, 699
for projectile motion, 727–730
Vector fields
conservative, 942–947
continuous, 929
curl of, 986–987
definition of, 929–930
differentiable, 929
divergence of, 956–958
electric, 942
flux density of, 958
gradient, 930–931, 945–946
gravitational, 942
integration in, 922–1008
and line integrals, 929–938
line integrals of, definition of, 932
potential function for, 943
surface integrals of, definition of, 981
Vector functions
antiderivatives of, 725
of constant length, 722
continuity of, 717–718
curves in space and, 716–722
definite integral of, 726–727
derivatives of, definition of, 719
differentiable, 719
differentiation rules for, 720–722
indefinite integral of, 725
integrals of, 725–730
limits of, 717–718
Vectors
acceleration, 720, 745
addition of, 674–675, 682
algebra operations with, 674–675
angle between, 681–683
applications of, 678–679
binormal, of curve, 745
component form of, 672–674
coplanar, 675
cross product as area of parallelogram, 690–691
curl, 986–987
definition of, 672, 690
derivative in direction of, 798
as determinant, 691–692
direction of, 676
dot product, definition of, 682
equality of, 672
and geometry in space, 667–708
gradient, 800
in gravitational field, 930
i-component of, 676
initial point of, 672
j-component of, 676
k-component of, 676
length (magnitude) of, 672, 673
midpoint of line segments, 677
in navigation, 678
normal, of curve, 742–743
notation for, 672–673
parallel, 689
perpendicular (orthogonal), 683–684
in physics and engineering, 678–679
position, standard, 673–674
principal unit normal, 740, 749
projection of, 684–686
resultant, 674
right-hand rule for, 689
scalar multiplication of, 674–675
standard position, for a point, 673–674
standard unit, 676
subtraction (difference) of, 675
tangent, of curve, 719
terminal point of, 672
three-dimensional, 673
torque, 692–693
Triple scalar product of, 693–694
two-dimensional, 673
of two vectors in space, 690
unit binormal, 745
unit definition of, 676–677
unit normal, 742
unit tangent, 736–737
velocity, 672, 720
writing vectors in terms of, 676–677
zero vector, 673
Velocity
along space curve, 720
angular, of rotation, 992
average, 143
definition of, 143
free fall and, 145
instantaneous, 143
in polar coordinates, 750–751
and position, from acceleration, 212–213
Velocity fields
circulation for, 936–937
flow integral, 936–937
Velocity function
acceleration and, 212–213, 720
speed and, 271, 272
Vertex, of parabola, AP-15
Vertical asymptotes, 109. *See also* Asymptotes
limits and, 101
Vertical line test, 22
Vertical scaling and reflecting formulas, 35
Vertical shift of function, 34–35
Vertical strip, 343, 375
Vertical tangents, 123, 128
Viewing windows, 47–50
Volts, 17-19
Volume
of cylinder, 332
differential in cylindrical coordinates, 895
by disks for rotation about axis, 335
double integrals as, 851–852
by iterated integrals, 857–859
Pappus' theorem, 379–380
of pyramid, 333–334
of region in space, 875
by slicing, 332–334
of solid region, 856–859
of solid with known cross-section, 333
in spherical coordinates, 899, 900
triple integrals as, 875
using cross-sections, 332–339
using cylindrical shells, 343–348
von Koch, Helga, 552

W

Washer method, 337–339, 338
Wave equation, 787
Weierstrass function, 132
Weierstrass, Karl, 519
Whirlpool effect, 955
Wild oscillation, 128
Windows, graphing, 47–50
Work
by constant force, 362
by force over curve in space, 934–936
by force through displacement, 686–687
and kinetic energy, 369
by variable force along curve, 934
by variable force along line, 362–363

X

x-coordinate, AP-10
x-intercept, AP-13
x-limits of integration, 877, 881
xy-plane, 667
xz-plane, 667

Y

y-axis, revolution about, 359
y-coordinate, AP-10
y-intercept, AP-13
$y = f(x)$
graphing of, 225–227
length of, 351–353, 630
y, integration with respect to, 319–321
y-limits of integration, 876, 878, 881
yz-plane, 667

Z

Zero denominators, 67–68
Zero vector, 673
Zero Width Interval Rule, 287, 397
z-limits of integration, 876, 877, 880, 897
